

The Basic Blueprint Drawing and Sketching Ninth Edition Answer Key by John P. Breen is a book used to answer test questions from the Basic Blueprint Drawing and Sketching Ninth Edition textbook. It contains a discussion section, quizzes, fill-in-the-blank questions, multiple choice questions, true/false questions, and matching exercises. In this blog post we will offer the answer key from The Basic Blueprint Drawing and Sketching Ninth Edition Answer Key if you are having difficulty with any of these exercises or quizzes from The Basic Blueprint Drawing and Sketching 9th Edition Textbook. The next part of the answer key covers the following exercises: Paragraphs 1 through 54 will be repeated with one or more questions in each paragraph. 1. (a) The largest volume element of the 7.3m³ volume tank (Figures 4-14 and 4-15) is empty clear space, or void, which is defined as empty air that can never have any shape or volume. There are two other volumes that have empty space which are shown to be voids in Figures 4-19 and 4-29. Figure 4-34 has three volumes representing the three tanks, but only one is shown to have void space. The other two are filled with small volumes, the sum of which is greater than the volume of the tank itself. Which figure includes void spaces? 1. (b) The tank in Figure 4-19 has 80m³ in its largest volume, making it the best choice for filling in this space. The tank in Figure 4-34 has 150m³ in its largest volume, making it the second best choice because it can be filled more fully later when needed. The tank in Figure 4-29 has 120m³, and although there is a lot more space on this figure this will not fill an 80m³ void created by a previous filling operation. Which figure includes void spaces? 2. (a) The tank in Figure 4-19 has 80m³ in its largest volume, making it the best choice for filling in this space. The tank in Figure 4-34 has 150m³ in its largest volume, making it the second best choice because it can be filled more fully later when needed. The tank in Figure 4-29 has 120m³, and although there is a lot more space on this figure this will not fill an 80m³ void created by a previous filling operation. Which figure shows three tanks filled to their capacity? 3. (a) (b) The tank in Figure 4-19 has 80m³ in its largest volume, making it the best choice for filling in this space. The tank in Figure 4-34 has 150m³ in its largest volume, making it the second best choice because it can be filled more fully later when needed. The tank in Figure 4-29 has 120m³, and although there is a lot more space on this figure this will not fill an 80m³ void created by a previous filling operation. 4. (a) (b) The tank in Figure 4-19 has 80m³ in its largest volume, making it the best choice for filling in this space.
